BRIDEWELL HOSPITAL.

REPORT.

THE construction of the building and the maximum number of persons allowed to be imprisoned at one time, remain as in former years, viz. 70 males and 30 females, but the Prison Sub-Committee has recently directed that infants, committed with their mothers for nurture, shall not be regarded as heretofore as prisoners; and as such committals are of very frequent occurrence, this relaxation of the rule will occasion an increase in the average number of prisoners, without overcrowding the prison.

Maximum
number of
Prisoners.

The dietary in use in the prison is that suggested by the Secretary of State. As a general rule it is strictly adhered to, but it sometimes happens that a person is brought to prison for a period under one month, whose state of health renders a more liberal diet necessary than that to which he is properly entitled; in such cases, and in all cases of sickness, the diet is under the immediate direction of the Surgeon.

Dietary.

The tread-wheel is still in use for male prisoners sentenced to hard labour. Such as are not sentenced to hard labour, and old men, and youths under 14, are em-

Hard La
bour.

ployed in picking cocoa-nut fibre, as well as all female prisoners who are not required for, or are incapable of being more usefully employed in the laundry or at needle-work.

Out-of-door
exercise.

Previously to last year the prisoners had no out-of-door exercise, but the Treasurer and Sub-Committee being of opinion that it was necessary for the health of those not undergoing hard labour, that they should be occasionally taken out of the work-rooms, directed, that whenever the weather permitted, they should be made to walk for an hour every day in the quadrangle; and to enable this highly desirable practice to be carried on with security against escape, iron gates have been placed on the steps leading into the prison and into the rear of it, which during the time of exercise are kept locked and guarded.

Classifica-
tion.

The classification of the prisoners is attended to as well as the nature of the building will admit. The great difficulty is to keep by themselves, youths committed for the first time, who if suffered to have any communication with old and more hardened offenders, would soon become as depraved as they are, and would at the expiration of their imprisonment return to their friends far worse than when they left them. It is much to be wished that the magistrates would, in awarding punishment to juvenile offenders, shorten the duration of the imprisonment, and where the age admits, order it to be accompanied by whipping.

Juvenile
offenders.

The experience of this prison clearly shows that long imprisonment produces no good effect on youthful prisoners, but has a direct tendency the other way. When a boy first comes in, his distress is very great, he weeps bitterly, and will continue to feel acutely for perhaps a week; but

after that time he seems to undergo a perfect change ; he recovers the buoyancy of his spirits, and when the period arrives for his discharge he quits the prison without retaining any of that wholesome fear and dread with which he entered ; whereas had he been discharged before his mind had become familiarized with his situation, he would have carried away with him a vivid recollection of his sufferings, sufficient, it is believed, to deter him from a repetition of the crime for which he was committed.

Juvenile
offenders.

The truth of the opinion here stated is fully confirmed by the long experience in this prison of the present Inspector of Prisons in Scotland, who in his last Report to the Secretary of State, so amply enters into the subject of Juvenile delinquency and the mode by which it may be arrested.

	MALES.	FEMALES.	TOTAL.
The number of committals in the year 1848, has been	820	498	1318
Deduct those who have been committed more than once within the year	90	87	177
	<u>730</u>	<u>411</u>	<u>1141</u>
Deduct old offenders common to this, and other prisons	125	95	
Deduct those committed for the first time here, but known to have been in other prisons	43	19	
Deduct infants committed with their mothers	0	32	
	<u>168</u>	<u>146</u>	<u>314</u>
Number of first committals	562	265	827

Of the 177 re-committals within the year, 79 were Re-committals.

Re-committals.

committals of previous years, viz. 31 males and 43 females, leaving 98, viz. 59 males and 39 females, who were committed more than once in 1848, but who had not been previously to that year in this prison.

In the total number of committals during the year is included 28 city apprentices, of whom 2 were re-committals in 1848, and 4 from former years; the remainder had never been in prison previously.

Vagrancy.

The number of persons committed for begging, and for being found destitute about the streets, has been 274, viz., 105 males and 169 females, exclusive of those of the same class, sent to prison in default of payment of the fines inflicted upon them for breaking windows and street lamps.

Greatest number of prisoners at one time.

The greatest number of prisoners at one time has been 102, including those allowed to remain for a few days on sufferance after the period of their imprisonment had expired—the average number has been $92\frac{4}{9}$.

Number of prisoners sent to the House of Occupations, the Magdalen, &c.

During the year, 24 prisoners, viz., 19 boys and 5 girls, were received into the House of Occupations; 1 female has been admitted into the Magdalen, and 35 females have been placed under the care of the Committee of the Ladies' Patronage Society; 6 males and 2 females have been sent to their homes in the country at the expense of the Hospital, and 116 males and 83 females have received on their discharge small gratuities in money chiefly to enable them to support themselves for a day or two, whilst looking for employment, and in many instances donations of clothing have been made to such as stood greatly in need of them.

Sickness.

In the early part of the year typhus fever prevailed for some weeks in the prison, but the persons attacked

were under its influence when brought in, and the infection did not extend further. They had all been for a considerable time suffering great privations and had been exposed for many nights to inclement weather in the streets. When we take into consideration the unusual amount of sickness in London at that season, it is not surprising that the number of sick in this prison was something beyond the average, especially as a very large proportion of the persons committed were vagrants in a miserably destitute condition, and sent here rather from motives of humanity to receive food and shelter, than with a view to punishment or correction.

The number of infirmary cases in the year was 38, and the greatest number of sick at one time was 5. The deaths were 3. The verdict of the Coroner's Jury being in every case "Natural Death."

The conduct of the prisoners during the year has been generally good, and there has been no offence committed requiring severe punishment; but where a number of youths are brought together, and many of them probably for the first time in their lives subjected to any thing like restraint or discipline, it is obvious that slight breaches of prison rules will occur. The offenders were in nearly every case lads from 14 to 18 years of age.

The punishments for prison offences have been

	MALES.	FEMALES.	TOTAL.
Solitary confinement.....	113	15	128
Stoppages of food	31	0	31

The punishment by solitary confinement has never exceeded three days, and has been rarely more than 24 hours, for it is usual when a prisoner expresses sorrow

for his offence and promises amendment, to permit him to return to his work.

E. ADAMS,
Captain, Superintendent.

HOUSE OF OCCUPATIONS.

REPORT.

ON the 31st December, 1848, the number of inmates in the house was 200, of whom 102 were males and 98 females. Since the year 1844, the proceedings of which have already been reported to the Governors, 148 males and 134 females have been admitted, and 153 males and 117 females have been discharged.

In the annexed tables are recorded the number of inmates admitted in every year since the opening of the establishment in 1830 ; the number discharged during the same period ; the manner in which they have been disposed of ; their subsequent conduct, so far as it has been ascertained ; the places from which they were received ; the parties by whom they were recommended, so far as recommendations have been made ; and the expenses that have been incurred in the erection and repair of the buildings appropriated to their use, and in their maintenance, education, and industrial training.

In the investigation of the table respecting their conduct after leaving the institution, a large proportion will

be observed to be living reputably, on the earnings of their honest industry ; and it is not unfair to presume that the same may be the case with many of those whose conduct is recorded as unknown, as those amongst them who are doing well may, for obvious reasons, desire that their previous connexion with the establishment should be forgotten.

The same reasons may have induced many to abstain from applying for the rewards allowed by the Hospital for good conduct and continuance in service, as they could not have made the application without exposing their former position, and thereby endangering their future prospects in life.

It will be observed, also, that many of the males who have been in the Institution are now serving her Majesty in the army and navy. The Committee have given their particular attention to these means of providing for their inmates, and they have much satisfaction in stating, that those in the latter service have conducted themselves so well as to induce the officers under whom they have been placed to give a preference to boys from the establishment in filling up other vacancies. The education and the habits of obedience, order, and regularity, a youth will have acquired in the house, cannot fail to have made him a desirable recruit for either service ; and the knowledge of the trade or trades in which he will have been instructed may often tend to his pecuniary advantage, whilst the nature of the service in which he will be engaged diminishes greatly the probability of his ever again associating with his former vicious companions, or returning to his early evil courses.

In order to inculcate and encourage a desire to enter these services, the Committee have directed a model ship

to be erected in the boys' airing-ground, for the purpose of instructing them in the elementary knowledge of seamanship; and they are constantly drilled in marching and military exercises.

Several of the former inmates are now serving in India and other parts of the world—some as non-commissioned officers; and letters are frequently received from them which manifest a grateful remembrance of the benefits they have derived from the house, and which are written in a manner creditable to themselves and to the Establishment.

Many of the former male inmates, who have been provided for in a different manner, are now doing well. The following are a few of the numerous cases which might be adduced :—

A. B.—Admitted, after having absconded with his employer's money. He is now a collecting clerk to ———; receives a salary of 25s. per week, out of which he supports his father and mother.

C. D.—Robbed his master of several sums of money; now a brewer's servant, earning 25s, per week.

E. F.—Admitted from Newgate. He now holds a situation in a public office, and was messenger in a banking-house for some time. He partly supports his parents.

G. H.—A determined pilferer; now a respectable shoemaker. He helped to support his parents while they were in distress; and assisted his brother on his return from abroad.

I. I.—Tried at Newgate; now a respectable tradesman and in partnership with his father.

K. L.—Committed to Bridewell for pledging his master's property, and for a long time one of the most trouble-

some inmates in the house ; now a tailor, earning 30s. per week, well conducted, and married.

M. N.—Committed to Bridewell for selling his master's coat. Is now an engineer in a Government dock-yard.

The conduct of the former female inmates who are in service, is equally satisfactory. There has been no difficulty in obtaining places for them ; and the fact that the same parties make repeated applications to be supplied with other inmates, to replace those who have left them for better situations, may be regarded as a proof of the good which has been done.

The following are descriptions of a few of the cases admitted into the house, and the results.

A. B.—Deprived of her mother in childhood and neglected by her father ; taken care of by some of her relations, whom she robbed by the desire of her father ; she is now an excellent servant, and has received her third reward.

C. D.—This girl came from prison ; her mother was a poor charwoman ; she constantly robbed her mother's employers until taken into custody. She conducted herself well in this house, and kept her situations until she married.

E. F.—An orphan, a determined thief ; the last charge against her was for robbing her employers. Having conducted herself well, she was sent to a situation. She is now married and very respectable.

G. H.—has a poor, but honest, mother ; was a decided thief ; conducted herself well in the house ; now keeps her situations as a respectable servant.

I. J.—This girl came from Newgate ; she had no mother. It was some time before she was broken of her pilfering habits, but is now doing well in a situation.

K. L.—This girl was a determined thief, and otherwise of bad character and temper. She conducted herself well in the house ; kept the situation provided for her, and is now married very respectably.

M. N.—This girl had been imprisoned for stealing money ; she had also robbed her parents of plate, &c., and was of an obstinate temper ; she conducted herself well in the house (except temper) ; a situation was obtained for her in the same family in which her father was butler ; she is now a teacher in an infant school, and receives a good salary.

O. P.—This girl, one of a family of gypsies, rescued from destruction, conducted herself well in the house and keeps her situations ; says she will not return to her wandering life, and is most grateful for her education and treatment.

Q. R.—One of five orphans sent to St. Luke's parish with their grandfather and grandmother ; was apprenticed to a milliner, and half starved ; she fell into bad company, and eventually was sent to Bridewell for pilfering. She conducted herself well in this house ; was sent to a situation, in which she remained two years, and is now conducting herself with propriety ; while in her situation she petitioned for her sister to be taken into the house, fearing she might not escape the same errors into which she herself had fallen.

S. T.—No mother ; a father not careful of his child, suffering her to be dancing in the streets with sweeps and mountebanks, dividing the pence with her ; a violent and rebellious temper, subdued a little while in the house ; had several situations, but is now a housekeeper in a gentleman's family ; after nine years' absence, she petitioned for a cousin, of a character very similar to her

own, to be admitted, and she expressed herself grateful for the advantages she had received.

U. V. — Led a wandering life, either begging or sweeping crossings in the city ; was brought to the house from Bridewell ; conducted herself well, as a hardworking girl, but apparently deficient in intellect ; has had several situations, but always left them with a good character ; is now a cook in a respectable family.

W. X. — An orphan ; fell into bad company ; was received on her own application, which no doubt saved her from destruction ; she conducted herself well, and is now a trustworthy character, doing very well in the world.

Y. Z. — This girl was received from Newgate, having been committed there for theft ; she, at the early age of eleven years, was a wanderer from her home, and altogether a bad character ; she conducted herself well in the house, and has had several situations since : has been married some years to a respectable engineer ; herself and family came to visit the matron about five months ago.

The estimation in which the Institution is held by the girls themselves, may be collected from the circumstance that whenever, by accident, or illness, or other causes, not arising from their own misconduct, they are out of situations, they come almost naturally to this house as their home, and ask for shelter, although they may, in some instances, have friends and relations. In such cases they are received by the matron, under the sanction of the Treasurer, and other situations are soon provided for them. The value of such assistance, in time of need and exposure can scarcely be sufficiently appreciated, excepting by those who witness the great good its effects, and are

aware of the evils it may avert. Many of the girls who are in service come to the matron, when they have a day's holiday, for leave to pass the day with their former companions, and the granting or refusal of this favour is regarded, throughout the house, as a pleasing reward for good conduct, or a serious mark of displeasure for misbehaviour.

The letters written to the matron by those girls who have not the opportunity of seeing her are highly satisfactory, both as to their acquirements and their grateful recollection of the benefits they have received from the Governors.

A Savings' Bank was established among the inmates of the house in July 1847. The deposits have gradually increased, and now amount to the sum of £105 11s. 5d. The sums withdrawn have only been £18 12s. 3d., generally under satisfactory circumstances. The last sum withdrawn was by a young woman for the purpose of purchasing additional clothing on the occasion of her marriage, which was about to take place with the full concurrence of her friends. This bank is, in every sense, a valuable adjunct to the house. The managers are elected half-yearly, from the class of monitors, the electors being the depositors.

The monitorial system, alluded to in former reports, continues to work well, that position having become of more consideration amongst the inmates since it has been made a necessary qualification for the office of Manager of the Savings' Bank.

The boys' and girls' school-rooms have been enlarged, and a floor built over each of them. To the former a class-room has been added. The additional floors were much needed for the accommodation of the inmates in

wet weather, and during the winter evenings. A residence has also been built for an additional schoolmaster, about to be appointed.

A copy of the Return of the State of the House on the 31st December, 1848, is appended.

The occupations of the male inmates have continued upon the same scale as before reported : being,

Engineer's work, Carpenters, Plumbers, Painters, Bricklayers, Masons, and Smiths, under the masters at Bethlem Hospital. Rope-making, Tailoring, Shoe-making, Baking, and Brewing, under the arts-masters.

In the tables (5, 6, 7, 8, 9) are given the quantities of such work executed in the house during the year 1848. All the household work on the male side is done by the boys. The female inmates have been employed, as before reported, in Needle-work, Laundry and Household-work, and Cooking, each in turn according to the proficiency they have acquired.

All the inmates, (boys and girls,) without exception, continue a fixed routine of instructions under the schoolmaster and schoolmistress, while none are exempted from an uninterrupted attendance at school until they have arrived at a sufficient degree of proficiency to admit of their being occupied a part of their time in learning the trade or occupation which is most likely to be useful to them in after life.

BETHLEM HOSPITAL.

REPORT.

To the Right Worshipful the PRESIDENT,
the Worshipful the TREASURER, and the
GOVERNORS of the Royal Hospital of
Bethlem.

MY LORDS AND GENTLEMEN,

WE have the honour of presenting to you our Report respecting the proceedings in Bethlem Hospital, during 1848, and we have every reason to believe it will be considered satisfactory, as it exhibits an average amount of success.

The number of Curable Patients admitted during the year, was 306, being 118 males, and 188 females. The number of Patients of this class remaining in the Hospital at the close of the year, including 12 out on leave, was 213, being 12 more than the number on the books at the commencement of the year.

CURED.

The number of Patients of this class, discharged cured during the year, has been 156, consisting of 74 males, and 82 females, which may be considered a satisfactory

number, when it is borne in mind that 26 cases admitted as curable have been discharged, being paralytic, and otherwise improper objects for the curable department, and 14 were removed by their friends before their cure was effected.

UNCURED.

The number of Patients of this class discharged uncured during the year has been 85, consisting of 34 males and 51 females.

DEATHS.

The number of curable Patients who have died during the year is 11, consisting of 2 males, and 9 females.

The table opposite contains a more particular account of their deaths, as well as of those which have occurred amongst the Incurables and Criminals, amounting in all to 23.

HEALTH.

The health of the Patients has been generally good ; some instances of Diarrhœa have occurred, but none of importance, and certainly in no instance accompanied by the characteristics of Cholera, from which fatal disease the Hospital has been again mercifully preserved.

This must be attributed, under the Divine blessing, to the great cleanliness and efficient ventilation of the Establishment, and the many precautionary measures adopted for the preservation of health.

It must not be forgotten also that several patients die, small as is the proportion of deaths, of diseases or infirmities which they bring with them into the hospital, and

PARTICULARS OF PATIENTS who have DIED during the year 1848, as
Reported by the Physicians to the Bethlem Sub-Committee.

	Sex.	Age	Condition.	Admitted.	Died.	Cause of Death.
1	Female .	33	Curable .	10th Dec. 1847	2nd Jan. 1848	Pulmonary Consump- tion.

16	Female .	36	Curable .	30th June, 1848	15th July .	Pulmonary consump- tion.
17	Female .	21	Curable .	11th Aug. 1848	15th Aug. .	Pulmonary consump- tion.
18	Male .	76	Curable .	26th July, 1848	27th Sept. .	Bronchitis and general dropsy.
19	Female .	67	Incurable .	14th Oct. 1819	30th Oct. .	Disease of the heart.
20	Male .	71	Incurable .	6th May, 1824	3rd Dec. . .	Gradual exhaustion.
21	Female .	42	Incurable .	3rd April, 1828	5th Dec. . .	Pulmonary consump- tion.
22	Female .	28	Curable .	20th Oct. 1848	17th Dec. .	Disease of the brain.
23	Female .	44	Curable .	21st July, 1848	24th Dec. .	Disease of the heart.

which from benevolent motives, have not been permitted to operate as hindrances to their admission.

GENERAL TREATMENT.

The usual combination of kindness and firmness has been exhibited throughout the year, by the Officers and Servants of the Institution, a qualification difficult to be obtained, but most essential in promoting the process of cure.

CLASS OF PATIENTS.

The variety of classes admitted will be found in detail in the accompanying statistical tables, which have been prepared with great care, and which indeed constitute the essential part of this Report.

ATTENDANTS.

The greatest care has been exercised in the selection of such additional attendants and nurses as have been engaged. Many of the servants of these classes have passed many years in the Hospital, and have become long habituated to their duties.

The amount of regular and steady attention required of them is very considerable, and they have succeeded by their uniform kindness in securing the esteem of a large class of patients.

PUPILS.

There has been a considerable increase of attendance and much intelligence displayed on the part of the Pupils. The proposed formation of a more regular School at

Bethlem, will accomplish all that can reasonably be expected ; and it is now distinctly understood that the Physicians will deliver a course of Lectures during the spring season of each year, commencing as shall be most agreeable to the wish of the Governors ; and they will have great pleasure in exerting their best endeavours to render the Lectures effective.

AMUSEMENT AND OCCUPATION.

A large proportion of patients have been engaged as usual in useful works or entertaining occupations which beguile many tedious hours, and by drawing off the attention from besetting delusions, contribute in no small degree to the restoration of mental health.

The average number of Patients employed has been 243, being 135 males and 108 females. The men in the garden, the workshops, and galleries ; the women in the laundry and work-room. One of the Criminal Patients is engaged in the execution of a picture, which displays considerable talent.

DIVINE SERVICE.

The average number attending chapel has been 137, being 72 males and 65 females, which is as great a proportion as is reported in former years. There are some Patients who derive considerable consolation from the service, and all behave with becoming decorum.

CLASSIFICATION.

Every endeavour is made to classify the Patients according to their immediate condition, whatever it may be,

and the gradations observed are sufficiently marked to promote the improvement of Patients under treatment, and present a considerable range, from the excited to the tranquil patients in the work and reading-rooms.

The Department appropriated to the excited Patients is occasionally noisy. This prevails much more among the females than the males.

A greater sub-division of Patients of this class is desirable, and measures are in progress for carrying out such an arrangement.

RESTRAINT.

The degree of restraint as recorded in the weekly statement presented to the Committee during 1848, has been very small. The average number constantly under restraint

In 1843	was	$3 \frac{1}{13}$
„ 1844	„	1
„ 1845	„	$1 \frac{5}{13}$
„ 1846	„	$\frac{2}{3}$ of 1
„ 1847	„	$\frac{90}{365}$
„ 1848	„	$\frac{73}{366}$

So that the last year presents the smallest amount of restraint ever employed.

Much has recently been said on this subject; the report above answers in brief and undeniable terms any misapprehensions which may have arisen. It needs no rhetoric to enforce a plain arithmetical calculation.

The decrease of restraint has been gradual, and can scarcely, from the nature of things, decline much further.

That it is sometimes necessary is too evident, but it should always be avoided if possible, and its only legiti-

mate use is protection ; its use is recognized by acts of Parliament, which have directed that every resort to it should be accurately recorded ; its abuse lies at the door of those who are so wanton or negligent as to abuse it.

INCURABLES.

On the 31st of December, the number of Patients of this class was 79, consisting of 42 males and 37 females.

During the year there have been admitted 3 males and 1 female, and 1 male and 4 females have died. The latter, includes an aged female Patient who had resided 54 years in Bethlem, and was one of the few who had been an Inmate of the old Hospital in Moorfields ; she was of decorous manners and universally respected.

CRIMINALS.

The number of Criminal Patients admitted during the year have been 20, viz.—19 males and 1 female.

There have died 7 males.

Ten males and one female have been discharged by order of the Secretary of State, having recovered.

There remained at the close of the year 93 males and 18 females, making 111 of this class. They are generally healthy, and many of them active and industrious.

We have the honour to remain,

My Lords and Gentlemen,

Your very faithful Servants,

EDWARD THOS. MONRO, M.D.

ALEX. MORISON, M.D.

*Cavendish Square,
27 Jan. 1849.*

No. 28.

PARTICULARS OF PATIENTS who have DIED during the year 1848, as
Reported by the Physicians to the Bethlem Sub-Committee.

	Sex.	Age	Condition	Admitted.	Died.	Cause of Death.
1	Female .	33	Curable. .	10th Dec. 1847	2nd Jan. 1848	Pulmonary Consump- tion.
2	Male .	34	Criminal .	20th Aug. 1840	17th Jan. . .	Epilepsy with disease of the brain.
3	Male .	63	Criminal .	4th Dec. 1816	16th Feb. . .	Apoplexy.
4	Female .	59	Curable .	17th Jan. 1848	21st Feb. .	Disease of the lungs and gradual exhaustion.
5	Male .	36	Criminal .	12th Sept. 1846	22nd Feb. .	Apoplexy.
6	Female .	81	Incurable .	16th Feb. 1820	11th March .	Cancer and general dropsy.
7	Male .	26	Criminal .	12th Sept. 1846	19th March .	Pulmonary Consump- tion.
8	Male .	85	Criminal .	9th Dec. 1816	27th March .	Pulmonary Consump- tion.
9	Male .	48	Curable .	31st Dec. 1847	1st April .	Paralysis from disease of the brain.
10	Female .	19	Curable .	24th March 1848	19th April .	Gangrenous abscess of the lungs.
11	Male .	47	Criminal .	1st July, 1828	2nd May .	Disease of the lungs.
12	Female .	69	Curable .	12th May, 1848	28th May .	Gradual exhaustion.
13	Male .	24	Criminal .	17th Aug. 1843	3rd June .	Pulmonary Consump- tion.
14	Female .	81	Incurable .	16th Aug. 1794	3rd July .	Syneope.
15	Female .	42	Curable .	30th June, 1848	6th July . .	Exhaustion with cou- vulsions.
16	Female .	36	Curable .	30th June, 1848	15th July .	Pulmonary consump- tion.
17	Female .	21	Curable .	11th Aug. 1843	15th Aug. .	Pulmonary consump- tion.
18	Male .	76	Curable .	26th July, 1848	27th Sept. .	Bronchitis and general dropsy.
19	Female .	67	Incurable .	14th Oct. 1819	30th Oct. .	Disease of the heart.
20	Male .	71	Incurable .	6th May, 1824	3rd Dec. . .	Gradual exhaustion.
21	Female .	42	Incurable .	3rd April, 1828	5th Dec. . .	Pulmonary consump- tion.
22	Female .	28	Curable .	20th Oct. 1848	17th Dec. .	Disease of the brain.
23	Female .	44	Curable .	21st July, 1848	24th Dec. .	Disease of the heart.
